On February 27, 2017, the 10th annual *Teaching & Learning with Technology Day* saw a record number of attendees explore new tools and best practices in educational technology. Markham Campus provided the setting. There were opening remarks from VPA Laurel Scholten, an update from AVP Information Services Radha Krishnan, and the now-infamous 'elevator pitches' from session presenters.

Then it was off to the jam-packed sessions. Presenters covered a wide range of topics and tools: Teaching & Learning's My Seneca course templates designed to enhance and improve the effectiveness of courses for students, an exploration of the unprecedented learning opportunities afforded by cutting edge approaches to learning in Augmented Reality, clever tricks on how to create passwords which are both secure and easy to remember, building interaction through your course design, using OneDrive for student engagement, getting a tool like Feedly to collect and organize news and other content for you, online accessibility, and many more.

Many presenters have made their materials available for download on the [Past Presentations](#) page of the *Teaching & Learning With Technology Day* website. Bonus: presentations from previous years are also available!

As with any event of this size, planning for next year's conference will begin soon. Bookmark the [Teaching & Learning with Technology Day website](#) to keep up to date on the latest developments.
